the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million (13.5% of the population).

There are a number of reasons why the number of people aged 65 and over has increased. One of the main reasons is that people are living longer. The life expectancy at birth in the UK is now 78 years for men and 82 years for women (ONS 2002).

Another reason is that people are having children later in life. This means that there are more people aged 65 and over who have children who are still alive.

There are also a number of reasons why the number of people aged 65 and over is expected to increase in the future.

One of the main reasons is that people are expected to live even longer. The life expectancy at birth in the UK is expected to increase to 81 years for men and 85 years for women by 2030 (ONS 2002).

Another reason is that people are expected to have children even later in life. This means that there will be even more people aged 65 and over who have children who are still alive.

There are also a number of reasons why the number of people aged 65 and over is expected to increase in the future.
